

INTUROTEL Esmeralda Park Self-Consumption Project

As a commitment to improve sustainability and reduce the carbon footprint associated with electricity production, a self-consumption installation using photovoltaic panels has been implemented to enhance the competitiveness and energy efficiency of the establishment.

The annual forecast for photovoltaic energy production is estimated at 145 419 kWh, of which more than 99% is expected to be self-consumed throughout the different months of the year. This will result in an annual saving of 143 881 kWh of energy acquired from the grid.

The project has benefited from incentives related to self-consumption with renewable energy sources under the framework of the European Union's Recovery, Transformation, and Resilience Plan, financed by NextGenerationEU.
